

**Butterfly valve with Wafer types**

- For open and closed cold and warm water systems
- For switching heat generators or cooling machines on/off

**Type overview**

Type	DN [ ]	DN ["]	kvmax [ m <sup>3</sup> /h]	kvs [ m <sup>3</sup> /h]	PN [ ]
D625N	25	1	50	24	6 / 10 / 16
D632N	32	1 1/4	55	25	6 / 10 / 16
D640N	40	1 1/2	65	27	6 / 10 / 16
D650N	50	2	100	30	6 / 10 / 16
D665N	65	2 1/2	170	50	6 / 10 / 16
D680N	80	3	260	75	6 / 10 / 16
D6100N	100	4	520	150	6 / 10 / 16
D6125N	125	5	880	260	6 / 10 / 16
D6150N	150	6	1400	400	6 / 10 / 16
D6350N	350	14	10300	3010	10 / 16
D6400N	400	16	14200	4140	16
D6450N	450	18	18800	5490	16
D6500N	500	20	24100	7060	16
D6600N	600	24	37300	10900	16
D6700N	700	28	42800	11760	16

The types D6200N, D6250N and D6300N have been replaced by the types D6200W, D6250W and D6300W. For technical data please check the datasheet D6..W.

**Technical data**

<b>Functional data</b>	Fluid	Cold and warm water, water with glycol up to max. 50% vol.
	Fluid temperature	-20...120°C
	Permissible operating pressure ps	1600 kPa
	Leakage rate	tight, leakage rate A (EN 12266-1)
	Angle of rotation	90°
	Installation position	upright to horizontal (in relation to the stem)
	Suitable connection flange	In accordance with ISO 7005-2 and EN 1092-2
	Servicing	maintenance-free
	<b>Materials</b>	Housing
Closing element		stainless steel (1.4308)
Stem		stainless steel AISI 420 (1.4021)
Stem seal		EPDM O-ring
Stem bearing		RPTFE
Seat		EPDM

## Safety notes

- The valve has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The valve does not contain any parts that can be replaced or repaired by the user.
- The valve may not be disposed of as household refuse. All locally valid regulations and requirements must be observed.
- When determining the flow rate characteristic of controlled devices, the recognised directives must be observed.
- The damper must be opened and closed slowly in order to avoid hydraulic shocks in the pipe system.

## Product features

- Mode of operation** The butterfly valve is opened or closed completely by an open/close rotary actuator. Continuous rotary actuators are connected by a commercially available controller and move the valve to any position desired. The valve disk made of stainless steel is pressed into the soft-sealing EPDM seat by a rotary movement and ensures leakage rate A (tight). The pressure losses are slight in the open position and the kv value is at a maximum.
- Manual override** Manual throttling or isolation can be carried out with a lever or a worm gear (see «Accessories»).
- With lever (DN 25...150): Adjustable in 10 ratchet steps with position indication ( 0 = 0° (angle); 9 = 90° (angle) )
  - With worm gear (DN 25...700): steplessly adjustable (self-locking) with position indication.

## Accessories

	Description	Type
<b>Electrical accessories</b>	Stem heating flange F05 DN25...100 (30 W)	ZR24-F05
<b>Mechanical accessories</b>	Worm gear for butterfly valves DN 25...100	ZD6N-S100
	Manual control for butterfly valves DN 25...100 DN 25...100	ZD6N-H100
	Worm gear for butterfly valves DN 125...300	ZD6N-S150
	Manual control for butterfly valves DN 125...150 DN 125...150	ZD6N-H150
	Worm gear for butterfly valves DN 350	ZD6N-S350
	Worm gear for butterfly valves DN 400	ZD6N-S400
	Worm gear for butterfly valves DN 450	ZD6N-S450
	Worm gear for butterfly valves DN 500	ZD6N-S500
	Worm gear for butterfly valves DN 600	ZD6N-S600
	Worm gear for butterfly valves DN 700	ZD6N-S700

**Installation notes**

**Recommended installation positions** The butterfly valves may be mounted upright to horizontal. The butterfly valves may not be installed in a hanging position i.e. with the spindle pointing downwards.

**Water quality requirements** The water quality requirements specified in VDI 2035 must be adhered to.

**Stem heating** In cold water applications and warm humid ambient air can cause condensation in the actuators. This can lead to corrosion in the gear box of the actuator and causes a breakdown of it. In such applications, the use of a stem heating is provided. The stem heating must be enabled only when the system is in operation, because it does not have temperature control.

**Servicing** Butterfly valves and rotary actuators are maintenance-free. Before any service work on the final controlling device is carried out, it is essential to isolate the rotary actuator from the power supply (by unplugging the electrical cable if necessary). Any pumps in the part of the piping system concerned must also be switched off and the appropriate slide valves closed (allow all components to cool down first if necessary and always reduce the system pressure to ambient pressure level). The system must not be returned to service until the butterfly valve and the rotary actuator have been reassembled correctly in accordance with the instructions and the pipeline has been refilled by professionally trained personnel. To avoid a torque increase during off season shut down, exercise the butterfly valve (full open and close) at least once a month.

**Flow setting** The Belimo butterfly valves have an approximate equal percentage characteristic curve between 0...60% opening angle.
